

# Enrolment into the AthenaDiaX Data Service Program

## ❖ I am SENDER of Patient related Data

The AthenaDiaX system is prepared for a remote diagnostic service with co-operating physicians and clinics. This allows delegating the procedure of ECG analysis and report-generation to a linked service partner. This specific form establishes the link between receiver and sender of Data.

---

Participant wants to **send** monitoring data to a receiving partner in order to be able to receive diagnostic services.

The participant will be provided an activation code to enable sending of ECG Data within the ThemisLight System along with a unique code, identifying the collaborating partner/receiver of Data.

### Declaration of Consent

I/We declare to be in agreement with the fact, that AthenaDiaX will hold, for a reasonable time, data of ECG Recordings from patients of my institution, in order to only enable the transfer of data between my/our Institution and associated Institutions for the purpose of collaboration. I have read the data privacy information shown below and agree with it. As a sender of data I will establish a Service Agreement with my collaborating Partners in which business rules are laid out, especially concerning the expected response time to receive a diagnostic report and the required protection and privacy of data according to local law.

### Dates and Signatures

**Please FAX Request to +49-3391-7392779**

AthenaDiaX will inform the receiver about the request confirming the consent to this collaboration.

---

**AthenaDiaX Only**

# Data Privacy Information for the ECG Diagnostic Service

The ThemisLight Software can transmit ECGs to a diagnostic service provider of your choice. In order to use this service you have to accept the data privacy statement shown below.

## Legal Basis

All data uploaded to the ECG transmission server is handled on base of paragraph 6 of the German data privacy regulation (Datenschutz-Grundverordnung, DSGVO).

## Purpose

The transmitted data serves for the following purposes:

- Analysis of the transmitted ECGs and th accompanying information
- Creation of a physician's report as a service

## Benefit

By using a diagnostic service provider you can

- save the time for creating a physician's report
- make use of the diagnostic service provider's expertise

## Extent

Upon registering for the diagnostic service no personal data is transferred yet. Solely your authorisation is checked locally and a diagnostic service is chosen.

Upon each ECG transmission the following data is transmitted unencrypted:

- name of the sending clinic
- identification number of the sending clinic
- identification number of the ECG recording
- date and time of the recording

Upon each ECG transmission the following personal data is transmitted encrypted:

- E-Mail address of the sending clinic
- country
- name of the sending physician
- serial number of the ECG recorder
- file number
- patient initials
- patient's sex
- patient's age
- indication for the examination
- recording duration
- ECG
- additional recording data (accelerometer, temperature and skin impedance)
- technical data of the ECG recorder

## Transmission Path

The uploaded data is intermittently stored on a transmission server operated by AthenaDiaX or an AthenaDiaX contract partner. It is then downloaded by the diagnostic service provider. During this process AthenaDiaX serves as a data handler and houses the data, without analysing the content.

The encrypted data is only decrypted after arriving at the diagnostic service provider. If no individual key was exchanged between you and your diagnostic service provider, a general key which is stored in the software is used for encryption.

## Location and Duration of Data Storage

Uploaded data intermittently ist stored on a ECG transfer server located in Germany, before it is transferred to the diagnostic service provider. The data is deleted latest 4 weeks after download by the diagnostic service provider.

The storage duration at the diagnostic service provider is determined by the diagnostic service provider.

## Free Choice and Change of Mind

At any point in time you can opt against the transmission of ECGs to a diagnostic service provider and process your ECGs locally. In this case you should deactivate the diagnostic service under *Options - Settings - Remote Transmission and Export - Activation of the communication functions* by entering an invalid release code.

## Deletion and Correction of Data

You have the right, to request the deletion or correction of the data transferred from you clinic or doctor's office to the ECG transfer server at any time. Please use the contact information given below. For deleting or correcting data at the diagnostic service provider please contact your diagnostic service provider.

## Contact

In case of questions you can contact AthenaDiaX GmbH at any time under
